

**PACOM UNISON**  
SECURITY MANAGEMENT MADE EASY

## The open, integrated security management platform.

PACOM Unison is an open and integrated security management platform that allows you to manage your access control, intrusion, fire, intercom and video from one single user interface. Unison is the solution of choice for organizations within verticals such as healthcare, universities, commercial buildings, public facilities, municipalities, airports and ports.

### **Why you should invest in an integrated security solution**

Experience tells us that organizations typically with two or more sub-systems will gain a lot more value by integrating these as opposed to managing them separately. The value proposition needs to take into account the training requirements and costs of each subsystem, the degree of 'openness' of the solution in terms of integration possibilities and how sustainable the solution is.

Hospitals

Universities

Municipalities

Airports

Ports

Commercial buildings

Museums

Public facilities

## Simple.

### **Intuitive User Interface**

Unison's intuitive GUI provides one friendly interface for all of the operator's activities without the need to switch from one application to another for additional actions. Navigation is simple and system operators can quickly and efficiently respond to events via Unison's high-resolution graphics, text acknowledgments and real-time interactive icons that indicate device location and status.

Unison "workspaces" enable administrators to define exactly what user interface should appear for a specific role or user - which toolbars, menus, and palettes appear, and where. Unison comes with default workspaces which can be changed or new ones can be created. Combined with the library of built-in skins, Unison users can define their own experience and choose the exact look and feel that they prefer.

## Smart.

### **Smart Tagging**

Unison offers the ability to tag any system object with a combination of keywords. Like a built-in search engine, adding keywords to any device or user dramatically simplifies system management and allow operators to search, filter and bulk-update large volumes of information.

### **Professional Site Maps with Ease**

Using Unison's unique CAD import wizard, a beginner can import a drawing and have fully interactive professional dynamic site plans within minutes. Unison's CAD import wizard intelligently links the CAD drawing symbols with system

devices during the import process – saving significant amounts of time that would otherwise be spent importing devices one at a time and placing them in the appropriate location on a site plan.

### **Automatic Upload of Configuration Data**

When integrating with a fire, intrusion or other subsystem, the task of manually programming hundreds, if not thousands, of different objects is time-consuming, repetitious and tedious. Unison intelligently uploads the configuration – minimizing data entry and programming errors and significantly speeding up commissioning.

## Integrated.

### **Open Architecture**

Unison's ability to interface to different subsystems enables organizations to preserve their original investments and consolidate them into an open management platform.

Unison's advanced design ensures that device drivers can be rapidly developed in line with new market opportunities and the core engine can be easily enhanced as technologies emerge. Offering full support for virtualization, database clustering and replication, Unison is an advanced platform built for applications where scalability and high availability are of paramount concern.

### **Subsystem Interoperability**

All the subsystems within Unison can be linked via intelligent macros. Macros can contain a multitude of expressions which defines what, how and when a specific event or command is activated.

### **Powerful Reporting**

Simple, yet powerful, Unison's reporting module allows users to make well informed business decisions. Users can select from a comprehensive library of built-in reports or choose to create their own using Unison's user friendly, drag and drop design tools.
