

DATASHEET

GMS – EMAIL INTERFACE

MAIN FEATURES

- ▶ Automatically email generated reports.
- ▶ Send email notification on GMS events.
- ▶ Send email notification on GMS alarms.
- ▶ Limit emails to special priority alarms only.
- ▶ Send email on systems status changes.
- ▶ Customise email message/text or use pre-configured system parameters.
- ▶ Send to individual email addresses or mail lists.

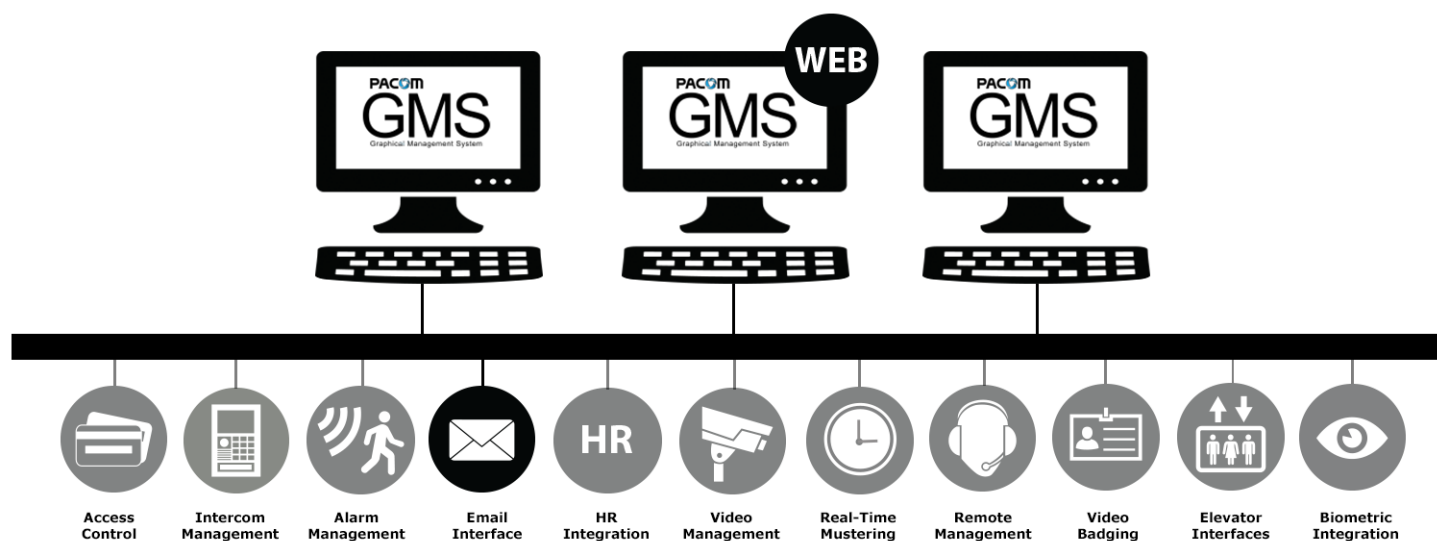

PACOM GMS is the perfect multi-site security management platform, providing integration between access control, intrusion, video, intercom, and virtually any building management or security solution.

PACOM GMS EMAIL INTERFACE

The GMS Email interface provides users with the flexibility to automatically or manually send messages to an email address when an alarm or event occurs within their security network. Even when a site is unmanned, an email message can be automatically dispatched to alert a GMS operator that a change in status or security breach has occurred, ensuring an efficient and rapid notification process.

The GMS email interface provides simple configuration for virtually any email service including Microsoft Exchange or Outlook and other popular email services such as Gmail and Yahoo.

In addition, the GMS email interface can also be used to automatically email reports in pdf or Microsoft excel formats. When a report is generated, GMS will send an email with the report attached, ensuring that important information is conveyed to the security and management teams as soon as it becomes available.

DESCRIPTION

The GMS Email interface can be configured to send an email on virtually any event or alarm that occurs in the system, including:

- Card access events
- Door forced alarms
- Device status changes
- Alarm system modes changes
- Area breach

Any alarm or event message can be quickly and easily customized using templates which can include free text or pre-defined event details in the message. Emails can be dispatched to one or more email addresses or an email list. Furthermore, to ensure that only critical information is emailed, the system can be configured to send messages on alarms of specific priority only.

COMPATIBILITY

Software Compatibility:

Microsoft Exchange / Outlook: GMS Version 4.07 or later

Gmail, Yahoo, etc.: GMS 4.10 or later

Operating System Compatibility:

Please refer to the GMS release notes for the latest operating system compatibility for each version. The GMS Email Interface for that version will also operate on those same Microsoft platforms.

ORDERING INFORMATION

PART NUMBER	TYPE CODE	DESCRIPTION
100 041 001	GMS-BASE	GMS 4.0. Starter kit including media and license file for one server, 5 PACOM controllers.
