

## FEATURES

- ▶ Automatically email generated reports
- ▶ Send email notifications on GMS events
- ▶ Send email notifications on GMS alarms
- ▶ Send email notifications on alarm system mode changes
- ▶ Notification of area breaches
- ▶ Limit emails to special priority alarms only
- ▶ Send email on system status changes
- ▶ Customise email message/text or use pre-configured system parameters
- ▶ Send to individual email addresses or mailing lists

The PACOM GMS Email Interface provides users with the flexibility to automatically or manually send messages to an email address when an alarm or event occurs within their security network. Even when a site is unmanned, an email message can be automatically dispatched to alert a GMS operator that a change in status or a security breach has occurred, ensuring an efficient and rapid notification response.

The GMS Email Interface provides simple configuration for virtually any email service including Microsoft Exchange or Outlook, and other popular email services such as Gmail and Yahoo. Any alarm or event message can be easily customized using templates which can include free text or pre-defined event details in the message. Emails can be dispatched to one or more email addresses or an email list. Furthermore, to ensure that only critical information is emailed, the system can be configured to send emails on alarms of specific priority only.

In addition, the GMS Email Interface can also be used to automatically email reports in PDF or Microsoft Excel formats. When a report is generated, GMS sends an email with the report attached, ensuring that important information is conveyed to the security and management teams as soon as it becomes available.

***PACOM GMS is the perfect multi-site security management platform, providing integration between access control, intrusion, video, intercom and virtually any building management or security solution.***

## OPERATING SYSTEM

Refer to the PACOM GMS Release Notes for the latest operating system compatibility for each version. The PACOM GMS Email Interface for that version will also operate on those same Microsoft platforms.

## COMPATIBILITY

PRODUCT	VERSION
